

Cargo Transport Security

Keeping your cargo and assets secure 24/7

CTR Secure Services have the capability to provide specialist cargo transport security throughout the DK, Europe and rest of the world, ensuring your cargo and assets are secure throughout their transportation.

This level of service includes road, air and sea, with differing levels of protection being offered via our cargo security teams.

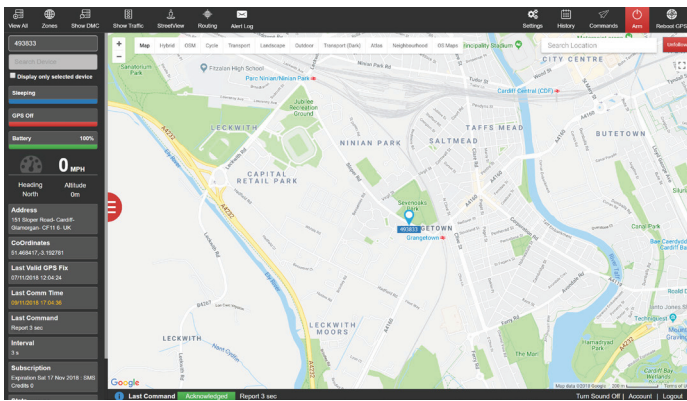

What makes us different?

The services based around our cargo transport security follow strict procedures and are based around three main principles, these being planning, tracking and security. From the outset, we ensure that every transport and accompanying security detail is planned meticulously.

Benefits of CTR Secure Services:

- Confirm cargo and transport details
- Emergency information
- Primary and secondary routes
- Tracking coverage
- Orders and responsibilities
- Innovative technological equipment

Tracking Solutions

Tracking comes as standard with our cargo transport security and this can be either person, vehicle or asset-based tracking. Our tracking portal allows our clients to immediately view any tracker at their discretion, providing continual peace of mind. Our cargo transport security teams all carry tracking devices.

Tracking provides a watchful eye over assets although in more high risk transports then a cargo transport security officer or team is recommended. Our trained officers hold a current SIA Close Protection license and have received up to date training in the following subjects:

- Protective surveillance
- First Aid
- Conflict management
- Advanced driving
- Communication and reporting

Securing your assets and cargo is the final stage of the strategy and one which can be facilitated in various ways and using various security options. Through planning and tracking, we will have a competent and professional protective surveillance of your assets. Compliment this with physical escorts, protective surveillance and response teams, then you have a complete cargo transport security strategy.

Process

In order to add the most value to your business, then we need to understand your business, your staff and your operational goals. This will require a non-intrusive assessment conducted by individuals with the highest level of expertise and customer respect.
